

# LIVESTREAMING

A technical exploration into Livestreaming and sharing of best practices

Presented by:

**Clinton Matlack**

Regional Support Specialist Central Support

**&**

**Chris Stewart**

Senior Regional Support Manager

ROBOTICS EDUCATION &  
COMPETITION FOUNDATION

**SUMMIT**

| VEX ROBOTICS PROGRAMS |

### **Robotics Experience**

Involved with VEX in Ohio for the past 15 years - team mentor, photographer, tech support, livestream, EP

### **Event Experience**

On the EP Team for the Kalahari Classic Signature Event and Ohio State Championship

### **Work Experience**

35 Years with the Delaware County Engineer's Office - Information Systems Manager

# Clinton Matlack

RSS Central Support

[clint\\_matlack@recf.org](mailto:clint_matlack@recf.org)

Attended the RECF EP Summit for the past 3 years as an EP

Volunteer Mentor - North Union Robotics, V5RC & VIQRC

### **Robotics Experience**

21 Years of Robotics experience in multiple programs. 13 years experience in VEX programs as a Coach, EP and now with the REC

### **Event Experience**

Hosted many Live Remote Skills events, In person Qualifying events, and ERCs for both V5RC and VEX IQ

### **Work Experience**

Before joining the REC full time I was a teacher for 21 years. My most recent teaching job was Tech Ed and Project Lead The Way in Harrisburg South Dakota

# Chris Stewart

## Senior Regional Support Manager

[chris\\_stewart@recf.org](mailto:chris_stewart@recf.org)

I have a passion for robotics and have been fortunate enough to find a job that blends my passions and my skills and where I work with and learn from a group of like minded individuals.

As a Regional Support Manager I manage the upper Midwest to include North Dakota, South Dakota, Minnesota, Wisconsin, and Michigan, and I also assist with the JROTC programs

# Mission & Vision

## Mission

The Robotics Education & Competition Foundation's global mission is to provide every educator with competition, education, and workforce readiness programs to increase student engagement in science, technology, engineering, math, and computer science.

## Vision

We see a future where every student designs and innovates as part of a team, overcomes failure, perseveres, and emerges confident in their ability to meet global challenges.

**Inspiring students,  
one robot at a time.**

# 01

## Why To Livestream The Benefits

# The Benefits of Livestreaming

- Elevate your events
- Exposure for your robotics program
- Scouting (Teams use match footage)
- Coaches, Teams, and Head Referees can see gameplay in other states
- Possible Sponsor partnerships (Ads or Logos)

# Adding Livestreaming To Your Event:

## Who should consider adding Livestreaming

- Livestreaming will add more technology, volunteers & equipment
- **New EPs** - Running your first few events is probably not the best time to add livestreaming
- **Experienced EPs** - Who have experience with running successful events, and want to elevate their tournaments

# Equipment: How Much Will This Cost Me?

## THE SKY'S THE LIMIT

- **Beginner** - Computer, Webcam, Tripod, USB Extender, Cables, OBS Software. \$
- **Advanced** - NDI Network Cameras, Network Knowledge, Audio Mixer, Network Cables, Router, etc. \$\$\$
- **Expert** - Video Mixers, Audio Mixers, NDI, SDI, HDMI Cameras. Networks, Livestreaming services. - \$\$\$\$

**OBS Studio**

The background image shows a VEX robotics competition. On the right, a young girl in a white t-shirt with 'VEX 20. 872584 DRAGON TEAM' and grey pants is reaching up to catch a white ball. On the left, another person in a similar t-shirt is partially visible. In the foreground, a complex VEX robot is shown, featuring a large white ball on a rotating platform. The scene is overlaid with a large blue '02' and semi-transparent pink and blue filters.

# 02

## Livestreaming - The Basics

Let's Get Started

# Getting Comfortable with Livestreaming: Low-Stress Ways to Practice

Livestreaming adds another component to your event. Don't try to implement livestreaming before you are comfortable with the process.

Here are some low-pressure ways to experiment and build confidence:

- Scrimmage
- League - Maybe it's a small league– you can experiment with one camera, one field, low pressure
- VIQRC Event (Less field technology)
- Work your way up to larger tournaments

**Best Practices: When you're first experimenting with the livestreaming process, avoid broadcasting directly to YouTube. Instead, record your video locally to your computer.**

# Let's get started Livestreaming

## Basic Beginner Setup (Start Small)

Livestream equipment for a small two-field local tournament or league.

- 1 - Dedicated Livestreaming Computer with Networking capabilities. Tournament Manager & OBS (Open Broadcaster Software) installed. 3-4 USB Ports
- 1 - Youtube.com Streaming Account (Free)
- 2 - USB Webcams (90° Field of View)
- 2 - 9' Tripods (light stands)
- 2 - USB over Cat6 Cable Extender & Cat6 Cables

**Best Practices: Have a dedicated computer for your livestream. DO NOT run your Tournament Manager Server & livestream on the same computer.**

# Let's get started Livestreaming Basic Beginner Setup

Let's take a look at a basic video setup for a  
VEX V5 Robotics Competition with two fields

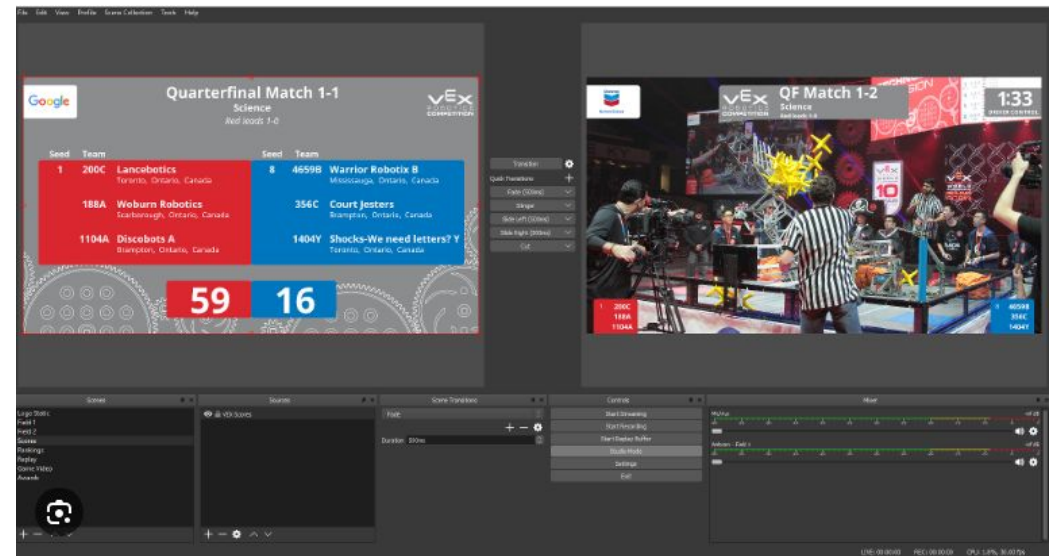

Each field has a camera pointing at it.

# Let's get started Livestreaming

## Basic Beginner Setup

These camera inputs go into the video switcher, which overlays the graphics from Tournament Manager onto the camera feed.

In this case, OBS is our video switcher handling the video sources of each field, and the Tournament Manager Overlays (sources) and combining both creates an OBS scene.

# Camera Placement & Overlays

## It's the little things.

Best Practices: Plan your camera setup in advance. Make sure that you leave enough space on the audience side of the field for proper camera placement. Tape everything down (tripods & cables).

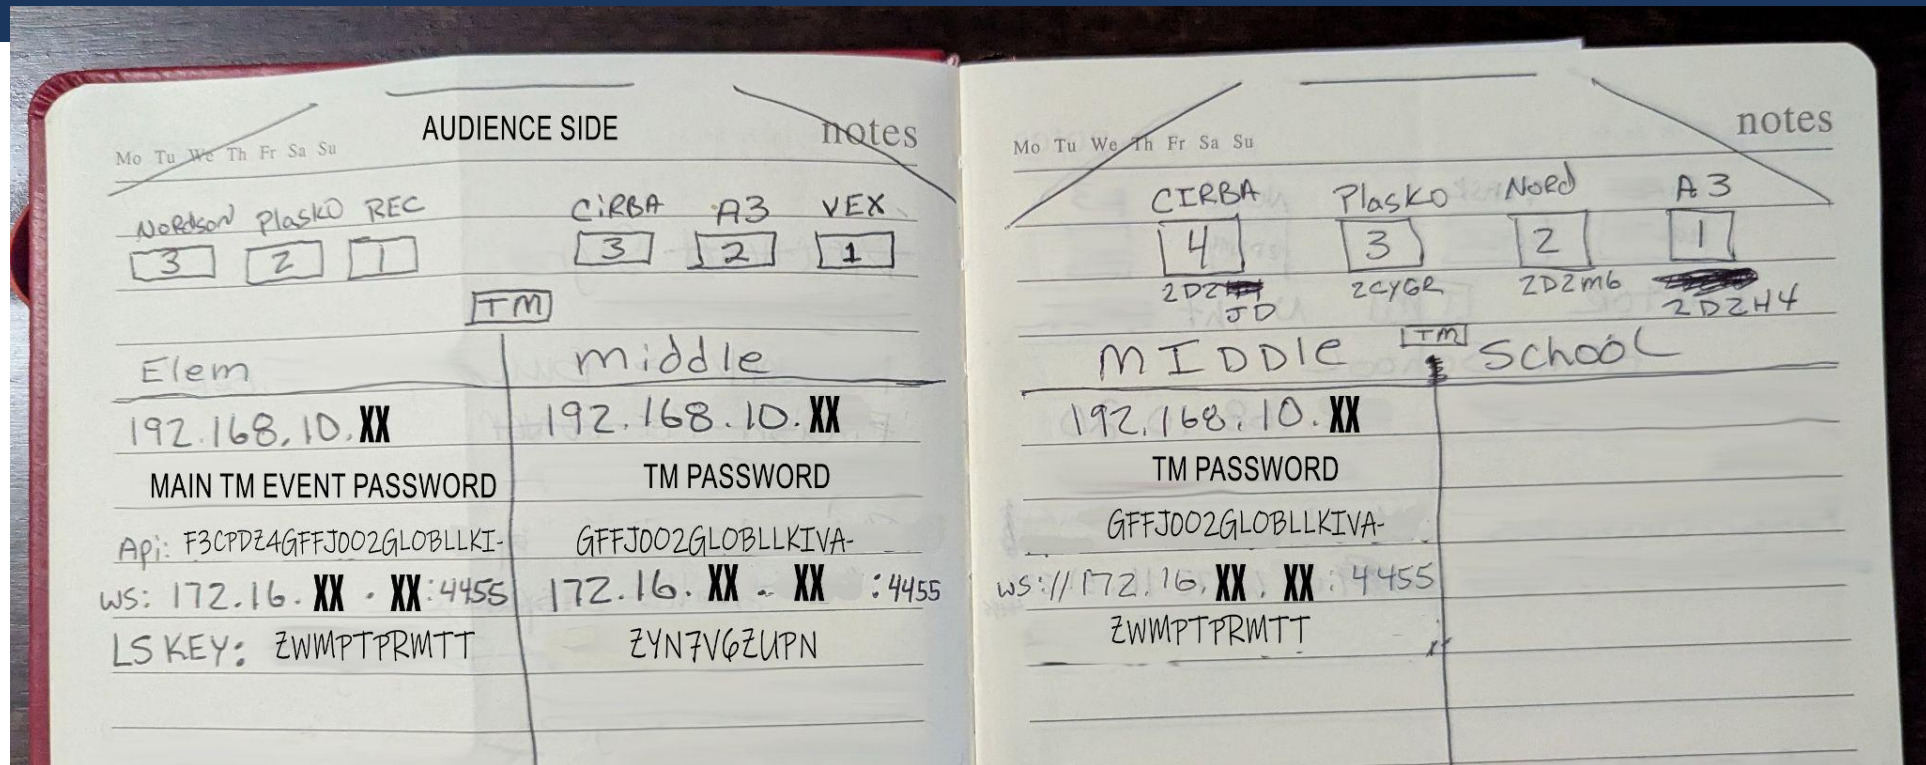

Sure, you can “reverse” the image in OBS, but the result is less than desirable, and will ultimately give you reversed text. If you have watched enough of the game, you can tell that something is off on the incorrect camera placement, and the gameplay just “feels off.”

# Plan your layout & Document Key Information Planning Is Key

Best Practices: Color-code & label livestream cables (Different from the Network). Map out your camera placements, and document necessary IP addresses, passwords, API Keys, Livestream channel keys.

Two Divisions

Single Tournament

# Things to Think About Beyond the Equipment

- 1st Priority... RUN THE EVENT!  
Livestream is secondary!
- Volunteers
- Network/Internet Speed
- Space & Setup Time - Plan accordingly
- Divisions - Twice the equipment
- Field sets - Complicate livestreams
- Network Restrictions -  
(Don't try to run on a hot spot)
- If necessary, record locally and upload recording later. (CEDAR POINT)
- Splash Screens - Canva, Fiver, etc.

# OBS Plug-Ins & Extras

- **OBS TM SWITCHER** - Automatically switches OBS scenes for each match - Brendan McGuire - RECF RSS
- **vextm-obs-source** - TM Overlays (Better Resolution)
- **OBS CAM Mobile** - Turn your Smartphone into a Mobile Camera, Android & Apple apps available

**TM SWITCHER**

# Don't get your stream shut down Livestreaming & Music

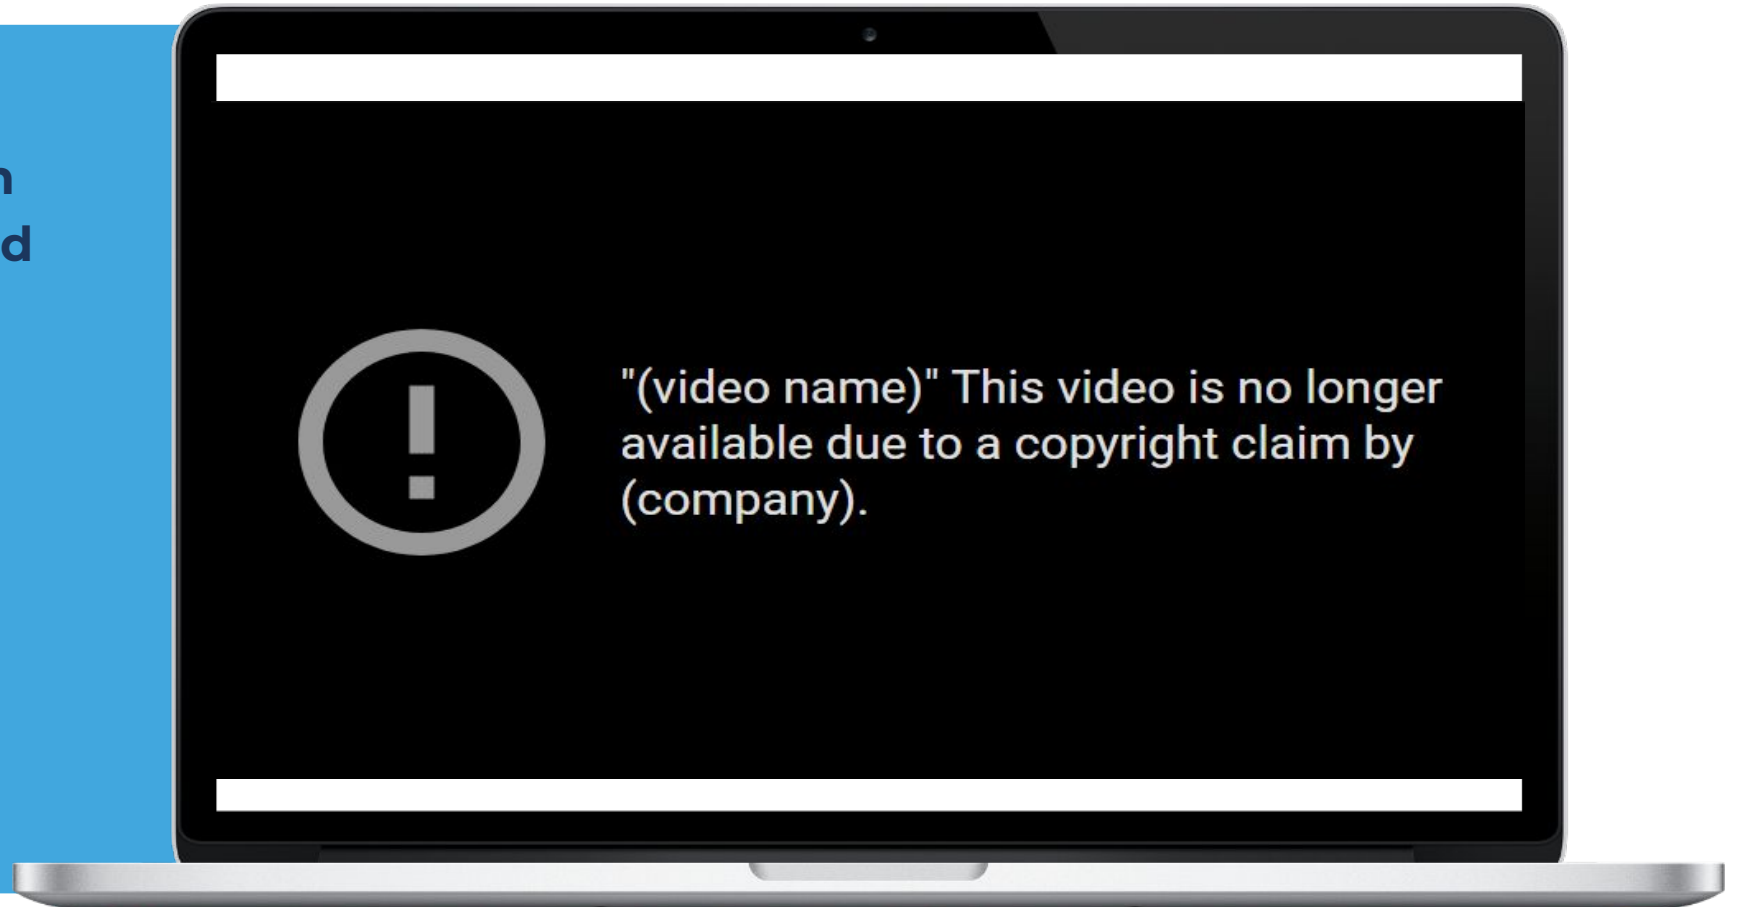

One of the fastest ways to have your livestream taken down is to play copyrighted music.

When streaming music be sure to use royalty-free music.

## A Great Community of Livestreamers

### RECF Knowledge Base Article

#### How to Livestream Your Robotics or Drone Tournament

REC Library / Event Partners / Planning / How to Livestream Your Robotics or Drone Tournament

#### How to Livestream Your Robotics or Drone Tournament

This article will review the basic aspects of setting up a livestream for your VEX Robotics or Aerial Drone Competition tournament. Whether you're running a VEX IQ, VEX V5, or Aerial Drone Competition event, the technical aspects of livestreaming are pretty much the same. The sections that follow provide information about the different kinds of cameras you might buy or use, video mixing, overlays, audio, and some recommended equipment. Livestreaming is recommended for experienced Event Partners who are already confident in their ability to organize and run an event using the standard tournament software.
